WORK EXPERIENCE

DepressionHub — Full Stack Developer

Sept 2023 – Aug 2024

- Built and owned a full-stack healthcare platform end-to-end (Node.js, React, PostgreSQL), implementing JWT authentication with role-based access for patients and doctors.
- Developed real-time messaging, video consultations (WebSockets, WebRTC), and a doctor appointment booking/scheduling system.

onBoardPouch — Full Stack Developer

Oct 2024 – Nov 2025

- Hardened authentication with Zod schema validation and multi-layer server-side security checks; eliminated race conditions in concurrent database queries via transactional locking.
- Built a granular-access user whitelist system restricting platform entry to approved users.

OPEN SOURCE CONTRIBUTIONS

Ava-labs / firewood — Merged PR #2082

July 2026

- Adds fwdctl import which streams CSV data, batches it into configurable chunks (default 10,000 records), and commits them. [View PR](#)

Ava-labs / firewood — Merged PR #2029

Jan 2026

- Added Db::update(batch) method that applies a batch, commits it, and returns the root hash in one atomic operation. [View PR](#)

Ava-labs / firewood — Merged PR #2092

July 2026

- Previously, the entire bitflags dependency and its complex macro system were being pulled in to track a single boolean state (ODD-LEN) [View PR](#)

Ava-labs / firewood — Merged PR #2095

July 2026

- Added input validation for untrusted num_items to prevent CPU-exhaustion/DoS from malformed proofs by enforcing early bounds checks based on remaining stream bytes. [View PR](#)

Solana Foundation / surfpool — Merged PR #586

Mar 2026

- Implemented Prometheus observability layer (+454 lines): transaction/RPC request rates, latency histograms per method, and mainnet account cloning latency. [View PR](#)

Solana Foundation / surfpool — Merged PR #489

Dec 2025

- Diagnosed and patched a critical bug in the surfpool RPC layer; fix accepted and merged by Solana Foundation maintainers. [View PR](#)

Anza-xyz / wincode — Merged PR #206

Jan 2026

- Contributed a correctness fix to the wincode Rust toolchain maintained by Anza-xyz. [View PR](#)

PROJECTS

Predicta (Rust, PostgreSQL, WebSocket)

[Link](#)

Developed a high-performance Rust-based backend library for Solana that analyzes transactions prior to submission, including success probability estimation, priority fee optimization, and runtime condition modeling (network congestion, slot timing, validator behavior). Adopted by 30+ active users; reduced failed transactions by ~20% and improved fee efficiency by ~15% in testing environments.

Decentralized Order Book (Rust, TypeScript, Anchor, Next.js, Solana)

[Link](#)

On-chain DEX orderbook on Solana with real-time order matching, event queue, and an off-chain Rust indexer for low-latency trade data.

Flux (Rust, Anchor, Viem, Ethers.js, Next.js, TypeScript, Web3.js, Reactjs)

[Link](#)

Flux is an intent-based cross-chain payment protocol that enables fast, seamless asset transfers using competitive solvers to fulfill user transfer intents across chains.

FinalZone (Rust, Axum, sqlx, PostgreSQL, Next.js, TypeScript)

[Link](#)

Built a full-stack BGMI/PUBG house-bookmaker platform for tracking tournament bets, with a Rust + Axum backend exposing RESTful APIs, sqlx for type-safe async PostgreSQL queries, and a Next.js/TypeScript frontend.

SKILLS

Languages	Rust, TypeScript, Solidity, JavaScript, SQL
Frameworks & Libraries	Next.js,Ethers.js, React.js, Node.js, Express, Anchor, web3.js, Tokio, Axum, sqlx
Infrastructure & Tools	PostgreSQL, MongoDB,VectorDB Redis, Docker, Docker Compose, AWS, Prometheus, Git
